

SMK_HARAPAN BANGSA_Depok_IDS_HARDENING

8. Pengujian IDS

✅ Step 1: Update Sistem & Install Build Tools

```
sudo apt update && sudo apt upgrade -y  
sudo apt install -y build-essential
```

💡 Penjelasan:

- `build-essential` : Instal compiler & tools penting seperti `gcc` , `make` , dll.
- Wajib untuk compile DAQ & Snort dari source.

✅ Step 2: Install Dependencies Wajib

```
sudo apt install -y \  
libpcap-dev \  
libpcap3-dev \  
libdumbnet-dev \  
zlib1g-dev \  
liblua5.1-dev \  
libnghttp2-dev \  
libssl-dev \  
libtool \  
bison \  
flex \  
autotools-dev \  
pkg-config \  
libnetfilter-queue-dev \  
libnfnetlink-dev \  
libtirpc-dev \  
wget \  
curl \  
unzip \  
xz-utils
```

💡 Penjelasan Fungsi Paket:

Paket	Fungsi
libpcap-dev	Sniffing packet dari interface (core Snort)
libpcre3-dev	Regex engine untuk filter trafik
libdumbnet-dev	Manipulasi jaringan level rendah
zlib1g-dev	Kompresi data log
lua-jit-5.1-dev	Lua scripting support
libssl-dev	SSL/TLS secure connection
libnetfilter-queue-dev, libnfnetlink-dev	Integrasi Snort + iptables
bison, flex	Parsing tools saat compile
libtirpc-dev	Modern RPC (ganti rpcbind lawas)
libtool, autotools-dev, pkg-config	Tools bantu compile source
wget, curl, unzip, xz-utils	Alat unduh dan ekstrak file source

✅ Step 3: Install DAQ (Data Acquisition Library)

DAQ adalah jembatan antara Snort dan network interface untuk ambil paket dari kernel.

```
cd /usr/src
sudo wget https://www.snort.org/downloads/snort/daq-2.0.7.tar.gz
sudo tar -xvzf daq-2.0.7.tar.gz
cd daq-2.0.7
./configure
make
sudo make install
```

💡 Penjelasan:

Tanpa DAQ, Snort tidak bisa membaca trafik jaringan.

✅ Step 4: Install Snort 2.x

```
# 1. Pindah ke direktori sumber
cd /usr/src

# 2. Download Snort source code (jika belum)
```

```
sudo wget https://www.snort.org/downloads/snort/snort-2.9.20.tar.gz

# 3. Ekstrak file tar.gz
sudo tar -xvzf snort-2.9.20.tar.gz

# 4. Masuk ke direktori hasil ekstrak
cd snort-2.9.20

# 5. Set environment variables (sementara, hanya untuk sesi ini)
export CFLAGS="-I/usr/include/tirpc"
export CPPFLAGS="-I/usr/include/tirpc"
export LDFLAGS="-ltirpc"

# 6. Konfigurasi, kompilasi, dan instalasi
./configure --enable-sourcefire
make
sudo make install

# 7. Buat direktori konfigurasi Snort
sudo mkdir -p /etc/snort/rules

# 8. Copy file konfigurasi default ke /etc/snort/
sudo cp etc/{classification.config,reference.config,snort.conf} /etc/snort/

# 9. Buat file aturan lokal jika belum ada
sudo touch /etc/snort/rules/local.rules
```

Penjelasan:

- Compile Snort dari source.
- Opsi `--enable-sourcefire` mengaktifkan fitur Sourcefire (asli developer Snort).

Step 5: Post-Install Setup

```
sudo ln -s /usr/local/bin/snort /usr/sbin/snort
sudo mkdir -p /var/log/snort
sudo mkdir -p /usr/local/lib/snort_dynamicrules
```

Penjelasan:

- Buat folder config & log.
 - `snort.conf` : konfigurasi utama.
 - `local.rules` : tempat custom rules dibuat.
-

✓ Step 6: Salin File Konfigurasi Default

```
cd /usr/src/snort-2.9.20/etc/  
sudo cp *.map *.dtd /etc/snort/  
sudo ldconfig
```

mematikan offload network, supaya paket yang dikirim ke tools IDS tidak dimodifikasi oleh hardware NIC dan ini yang menyebabkan notifikasi alert IDS tidak muncul saat website sedang diserang

sudo ethtool -K <interface-network yang digunakan untuk menjalankan IDS disarankan jika menjalankannya di virtual machine seperti: virtualbox dan vmware adapter networknya wajib Host-only atau Bridged, contoh interface-networknya : eth0, enp0s3 dan lain-lain> rx off tx off sg off tso off gso off gro off

💡 Penjelasan:

- Salin konfigurasi default agar Snort bisa langsung dites dan dikustomisasi.
- .map file = mapping alert ID ke deskripsi.

✓ Step 7: Cek Versi Snort

```
snort -V
```

✓ Output:

```
,,-      -*> Snort! <*-  
o" )~    Version 2.9.20  
' ' '    By Martin Roesch & The Snort Team  
          https://www.snort.org/
```

✓ Step 8: Tes Konfigurasi

vi /etc/snort/snort.conf # hapus konfigurasi default snort.conf yang tidak digunakan dan tambahkan/aktifkan konfigurasi milik saya, karena default konfigurasi snort.conf banyak yang error, sedangkan punya saya tidak error

bisa make teks editor ini alternatif vi
nano /etc/snort/snort.conf

```
# setelah konfigurasi snort.conf diatur lanjut ke konfigurasi
name_file.rules, default name_file.rules nya adalah local.rules, cuma kalo
mau rename nama_file.rules nya tidak masalah asalkan di pengaturan
konfigurasi snort.conf matching antara name_file.rules dengan snort.conf
nya, rules nya sudah saya buat tinggal copas dan masukkan di
name_file.rules milik saya anti error no gagal
```

```
vi /etc/snort/rules/local.rules
```

```
# setelah kedua konfigurasi itu sudah dilakukan baru kita uji tools snort
nya sudah jalan atau belum
```

```
snort -T -c /etc/snort/snort.conf
```

💡 Penjelasan:

- `-T` : test mode (tidak menjalankan Snort, hanya cek config).
- `-c` : spesifikasikan file konfigurasi.

🔧 Jalankan Snort dalam Mode IDS dan NMAP Scan

```
snort -i eth0 -c /etc/snort/snort.conf -A console
```

```
# tab baru
```

```
nmap -sV -p 22, 80 -T4 172.16.50.24
```

Ganti `eth0` dengan interface aktif (cek pakai `ip a`)

💡 Penjelasan:

- `-i eth0` : interface yang dimonitor.
- `-A console` : tampilkan alert ke terminal (log real-time).

📦 Ringkasan Komponen Penting

Komponen	Tujuan
DAQ	Jembatan Snort ke kernel packet capture
Snort 2.x	Engine deteksi utama
local.rules	File tempat menulis custom rule
snort.conf	Konfigurasi global Snort
libpcap, pcre, zlib, dnet	Dependencies inti

Komponen	Tujuan
<code>/var/log/snort/</code>	Lokasi log alert dan deteksi

snort.conf

```
#-----
#   VRT Rule Packages Snort.conf
#
#   For more information visit us at:
#       http://www.snort.org                Snort Website
#       http://vrt-blog.snort.org/         Sourcefire VRT Blog
#
#   Mailing list Contact:      snort-users@lists.snort.org
#   False Positive reports:    fp@sourcefire.com
#   Snort bugs:                bugs@snort.org
#
#   Compatible with Snort Versions:
#   VERSIONS : 2.9.20
#
#   Snort build options:
#   OPTIONS : --enable-gre --enable-mpls --enable-targetbased --enable-ppm
--enable-perfprofiling --enable-zlib --enable-active-response --enable-
normalizer --enable-reload --enable-react --enable-flexresp3
#
#   Additional information:
#   This configuration file enables active response, to run snort in
#   test mode -T you are required to supply an interface -i <interface>
#   or test mode will fail to fully validate the configuration and
#   exit with a FATAL error
#-----

#####
# This file contains a sample snort configuration.
# You should take the following steps to create your own custom
# configuration:
#
# 1) Set the network variables.
# 2) Configure the decoder
# 3) Configure the base detection engine
# 4) Configure dynamic loaded libraries
# 5) Configure preprocessors
# 6) Configure output plugins
# 7) Customize your rule set
# 8) Customize preprocessor and decoder rule set
# 9) Customize shared object rule set
#####
```

```
#####
# Step #1: Set the network variables. For more information, see
README.variables
#####

# Setup the network addresses you are protecting
ipvar HOME_NET any

# Set up the external network addresses. Leave as "any" in most situations
ipvar EXTERNAL_NET any

# Path to your rules files (this can be a relative path)
# Note for Windows users: You are advised to make this an absolute path,
# such as: c:\snort\rules
var RULE_PATH /etc/snort/rules
var SO_RULE_PATH /etc/snort/rules
var PREPROC_RULE_PATH /etc/snort/rules

# If you are using reputation preprocessor set these
# Currently there is a bug with relative paths, they are relative to where
snort is
# not relative to snort.conf like the above variables
# This is completely inconsistent with how other vars work, BUG 89986
# Set the absolute path appropriately
var WHITE_LIST_PATH ../rules
var BLACK_LIST_PATH ../rules

#####
# Step #2: Configure the decoder. For more information, see README.decode
#####

# Stop generic decode events:
config disable_decode_alerts

# Stop Alerts on experimental TCP options
config disable_tcpopt_experimental_alerts

# Stop Alerts on obsolete TCP options
config disable_tcpopt_obsolete_alerts

# Stop Alerts on T/TCP alerts
config disable_tcpopt_ttcp_alerts
```

Stop Alerts on all other TCPOption type events:

config disable_tcpopt_alerts

Stop Alerts on invalid ip options

config disable_ipopt_alerts

Alert if value in length field (IP, TCP, UDP) is greater than length of the packet

config enable_decode_oversized_alerts

Same as above, but drop packet if in Inline mode (requires enable_decode_oversized_alerts)

config enable_decode_oversized_drops

Configure IP / TCP checksum mode

config checksum_mode: all

Configure maximum number of flowbit references. For more information, see README.flowbits

config flowbits_size: 64

Configure ports to ignore

config ignore_ports: tcp 21 6667:6671 1356

config ignore_ports: udp 1:17 53

Configure active response for non inline operation. For more information, see README.active

config response: eth0 attempts 2

Configure DAQ related options for inline operation. For more information, see README.daq

#

config daq: <type>

config daq_dir: <dir>

config daq_mode: <mode>

config daq_var: <var>

#

<type> ::= pcap | afpacket | dump | nfq | ipq | ipfw

<mode> ::= read-file | passive | inline

<var> ::= arbitrary <name>=<value passed to DAQ

<dir> ::= path as to where to look for DAQ module so's

Configure specific UID and GID to run snort as after dropping privs. For more information see snort -h command line options

#

config set_gid:

config set_uid:

Configure default snaplen. Snort defaults to MTU of in use interface. For

```
more information see README
#
# config snaplen:
#

# Configure default bpf_file to use for filtering what traffic reaches
snort. For more information see snort -h command line options (-F)
#
# config bpf_file:
#

# Configure default log directory for snort to log to. For more information
see snort -h command line options (-l)
#
# config logdir:

#####
# Step #3: Configure the base detection engine. For more information, see
README.decode
#####

# Configure PCRE match limitations
config pcre_match_limit: 3500
config pcre_match_limit_recursion: 1500

# Configure the detection engine See the Snort Manual, Configuring Snort -
Includes - Config
config detection: search-method ac-split search-optimize max-pattern-len 20

# Configure the event queue. For more information, see README.event_queue
config event_queue: max_queue 8 log 5 order_events content_length

#####
## Configure GTP if it is to be used.
## For more information, see README.GTP
#####

# config enable_gtp

#####
# Per packet and rule latency enforcement
# For more information see README.ppm

```

Hasil Deteksi Serangan Port Scan:

Snort berhasil mendeteksi port scan yang dilakukan menggunakan Nmap pada port 22 dan 80. Deteksi muncul sebagai alert dengan pesan "Port Scan Detected on port 22" dan "Port Scan Detected on port 80" sesuai dengan rule yang dibuat.
